## GRAPHICAL METHOD OF SOLUTION OF A PAIR OF LINEAR EQUATIONS

The graph of a pair of linear equations in two variables is represented by two lines.

1. If the lines intersect at a point, then that point gives the unique solution of the two equations. In this case, the pair of equations is **consistent**.

2. If the lines coincide, then there are infinitely many solutions — each point on the line being a solution. In this case, the pair of equations is **dependent (consistent)**.
**3.** If the lines are parallel, then the pair of equations has no solution. In this case, the pair of equations is **inconsistent**.

## IMPORTANT QUESTIONS

**Solve the equation graphically: x + 3y = 6 and 2x – 3y = 12.**
**Solution:** Given that

$$x + 3y = 6 \Rightarrow 3y = 6 - x \Rightarrow y = \frac{6 - x}{3}$$

| x | 0 | 3 | 6 |
|---|---|---|---|
| y | 2 | 1 | 0 |

and $2x - 3y = 12 \Rightarrow 3y = 2x - 12 \Rightarrow y = \dfrac{2x - 12}{3}$

| x | 0 | 3 | 6 |
|---|---|---|---|
| y | -4 | -2 | 0 |

Now plot the points and join the points to form the lines AB and PQ as shown in graph
Since point B(6, 0) common to both the lines AB and PQ. Therefore, the solution of the pair of linear equations is x = 6 and y = 0
