CIRCLES

THEOREMS

1) The tangent to a circle is perpendicular to the radius through the point of contact.

2) The lengths of tangents drawn from an external point to a circle are equal.

Given : A circle C(O, r) and two tangents say PQ and PR from an external point P. **To prove :** PQ = PR.

Construction : Join OQ, OR and OP.

Proof : In $\triangle OQP$ and $\triangle ORP$

$$OQ = OR$$

 $OP = OP$

(radii of the same circle)

- (Common)
- $\angle Q = \angle R = \text{each 90}^{\circ}$ (The tangent at any point of a circle is perpendicular to the radius through the point of contact)

Hence $\triangle OQP \cong \triangle ORP$

$$\therefore PQ = PR$$
(By CPCT)

Hence Proved.

(By RHS Criterion)

IMPORTANT QUESTIONS

- 1. From a point Q, the length of the tangent to a circle is 24 cm and the distance of Q from the centre is 25 cm. Find the radius of the circle
- 2. In the below figure, if TP and TQ are the two tangents to a circle with centre O so that $\angle POQ = 110^{\circ}$, then find $\angle PTQ$.

- 3. If tangents PA and PB from a point P to a circle with centre O are inclined to each other at angle of 80°, then find \angle POA
- 4. Prove that the tangents drawn at the ends of a diameter of a circle are parallel.
- **5.** Prove that the perpendicular at the point of contact to the tangent to a circle passes through the centre.
- 6. The length of a tangent from a point A at distance 5 cm from the centre of the circle is 4 cm. Find the radius of the circle.
- 7. Two concentric circles are of radii 5 cm and 3 cm. Find the length of the chord of the larger circle which touches the smaller circle.
- 8. A quadrilateral ABCD is drawn to circumscribe a circle. Prove that AB + CD = AD + BC
- **9.** Prove that the angle between the two tangents drawn from an external point to a circle is supplementary to the angle subtended by the line-segment joining the points of contact at the centre.

- **10.** Prove that the parallelogram circumscribing a circle is a rhombus.
- **11.** Prove that opposite sides of a quadrilateral circumscribing a circle subtend supplementary angles at the centre of the circle.
- **12.** Prove that in two concentric circles, the chord of the larger circle, which touches the smaller circle, is bisected at the point of contact.
- **13.** XY and X'Y' are two parallel tangents to a circle with centre O and another tangent AB with point of contact C intersecting XY at A and X'Y' at B. Prove that $\angle AOB = 90^{\circ}$.

14. A triangle ABC is drawn to circumscribe a circle of radius 4 cm such that the segments BD and DC into which BC is divided by the point of contact D are of lengths 8 cm and 6 cm respectively. Find the sides AB and AC.

- **15.** Two tangents TP and TQ are drawn to a circle with centre O from an external point T. Prove that $\angle PTQ = 2 \angle OPQ$.
- **16.** PQ is a chord of length 8 cm of a circle of radius 5 cm. The tangents at P and Q intersect at a point T. Find the length TP.
- **17.** Two tangents PQ and PR are drawn from an external point to a circle with centre O. Prove that QORP is a cyclic quadrilateral.
- **18.** If from an external point B of a circle with centre O, two tangents BC and BD are drawn such that $\angle DBC = 120^{\circ}$, prove that BC + BD = BO, i.e., BO = 2BC.
- 19. Prove that the tangents drawn at the ends of a chord of a circle make equal angles with the chord.
- **20.** Prove that a diameter AB of a circle bisects all those chords which are parallel to the tangent at the point A.
- 21. From an external point P, two tangents, PA and PB are drawn to a circle with centre O. At one point E on the circle tangent is drawn which intersects PA and PB at C and D, respectively. If PA = 10 cm, find the the perimeter of the triangle PCD.
- **22.** In a right triangle ABC in which $\angle B = 90^{\circ}$, a circle is drawn with AB as diameter intersecting the hypotenuse AC and P. Prove that the tangent to the circle at P bisects BC.

MCQ (1 MARK)

1. Find the length of tangent drawn to a circle with radius 7 cm from a point 25 cm away from the centre.

(c) 26 cm (d) 25 cm (a) 24 cm (b) 27 cm

- 2. A point P is 26 cm away from the centre of a circle and the length of the tangent drawn from P to the circle is 24 cm. Find the radius of the circle. (a) 11 cm (b) 10 cm (c) 16 cm (d) 15 cm
- 3. From an external point P, tangents PA and PB are drawn to a circle with centre O. If CD is the tangent to the circle at a point E and PA = 14 cm, find the perimeter of the $\triangle PCD$.

- 4. In the above sided figure, PA and PB are tangents such that PA = 9cm and $\angle APB = 60^{\circ}$. Find the length of the chord AB. (d) 9 cm
 - (a) 4 cm (b) 7 cm (c) 6 cm
- 5. In the below figure the circle touches all the sides of a quadrilateral ABCD whose three sides are AB = 6 cm, BC = 7 cm, CD = 4 cm. Find AD.

- 6. In the above sided Fig., if TP and TQ are the two tangents to a circle with centre O so that $\angle POQ = 110^{\circ}$, then $\angle PTQ$ is equal to (b) 70° (c) 80° (d) 90° (a) 60°
- 7. If tangents PA and PB from a point P to a circle with centre O are inclined to each other at angle of 80°, then \angle POA is equal to (c) 80° (d) 50° (a) 60° (b) 70°
- 8. The length of a tangent from a point A at distance 5 cm from the centre of the circle is 4 cm. Find the radius of the circle.

(b) 3 cm (a) 4 cm (c) 6 cm (d) 5 cm

- **9.** From a point P, 10 cm away from the centre of a circle, a tangent PT of length 8 cm is drawn. Find the radius of the circle.
 - (a) 4 cm (b) 7 cm (c) 6 cm (d) 5 cm
- **10.** PT is tangent to a circle with centre O, OT = 56 cm, TP = 90 cm, find OP (a) 104 cm (b) 107 cm (c) 106 cm (d) 105 cm
- 11. TP and TQ are the two tangents to a circle with center O so that angle $\angle POQ = 130^{\circ}$. Find $\angle PTQ$.
 - (a) 50^{0} (b) 70^{0} (c) 80^{0} (d) none of these
- 12. From a point Q, the length of the tangent to a circle is 40 cm and the distance of Q from the centre is 41 cm. Find the radius of the circle.
 - (a) 4 cm (b) 3 cm (c) 6 cm (d) 9 cm
