

## Are Examination Necessary?

---

Examination aim at judging student's knowledge in a specific time frame. They enable the teachers to know how well students have understood the subject. A good result makes the teacher as well as the parents happy. The effort of the teacher is rewarded when students pass an examination with good marks. Thus, a teacher's dedication towards his profession is also judge through examination. Parents become proud of their children when they perform well in the examinations.

Students take their studies seriously, when examination are at their door step. They utilise their time for preparation. Examinations help the teachers and the parents in analyzing the amount of labour put in by the students in gaining knowledge.

However, there are certain flaws in the examination system. The system of education in india is based on the pattern set up by the British. The knowledge imparted is restricted to the syllabus. Students are taught according to the prescribed syllabus. Nothing much is taught beyond the syllabus. When student is unable to grasp a particular subject, he seeks private tuitions or enrolls himself in a coaching institute.

Students tend to learn their subjects by heart, without applying their mind. Thus, cramming enables many students to pass examination. Most students look towards their examinations with anxiety. They, at a very young age, being to feel the tension and stress of examinations.

Examination strikes at the self worth and their belief in themselves. prior to the board examinations, the emphasis of all schools is on completing the syllabus without having a thought as to whether any student has understood anything or not. As a result, students become helpless and join coaching centers. That is why tuition and coaching industry are flourishing.

Examination is just the first in a series of tests that initiate young ones into a competitive world. But the importance attached to them is unreasonably high. During the examination period and till the result is declared, not only the students but also their parents remain tense. It is regarded nothing less a do or die battle.

Student do not get enough spare time for games and are unable to give wings to their hobbies due to the burden of examination. Failure in the examination arouses a feeling of low self-esteem and negative self-image in the mind of the

students. Today some schools utilise the services of psychologists and counselors to help the students cope up with the pressure of examination.

Leakage of questions papers, copying and cheating in examination halls have become a common affair. Bribery and other corrupt practices also have crept into the examination system.

Examinations give a division {first, second etc.} or a grade {A,B,C,etc} to the student. The prevailing system of education does not help the students to make their career in life or to earn a decent living. The youth who fails to get the desired percentage of marks suffers the most.

In order to overcome the shortcomings, present in our educational system, many Education Commissions were set up from time to time to suggest changes in the pattern. Acting on their suggestions, Central Board of Secondary education and other state boards of Secondary Education decided to introduce a separate stream of vocational education. According to educational experts, ongoing evaluation is more effective than board examination. Class x examination have become a part of history. The Central Board of Secondary Education {CBSE} decided to give grades to class x students from 2011. Students may, if they wish ask for an examination to test their skills, but this will be voluntary. Further it has been suggested that class XII examinations be staggered over a two-year period. Experts feel the need to evaluate a student performance continuously during the whole year. For this purpose, periodic tests may be held regularly. This could make the examination system more acceptable and tension free.

The aim of education should be to equip the students for the tough battle of life. It should help to build their character and personality. It should widen their sphere of knowledge and qualify them for employment. The educational system should not only be theoretical and academic but also give practical knowledge.

Students should not be encouraged to learn by rote. Projects and term papers may add sum and substance to student's knowledge base. When History, Geography and Mathematics are reduced to mere digits on a mark sheet, they cease to inspire or give joy.

The method of teaching and assessment needs to be overhauled. It should be designed keeping in mind a healthy, inspiring and joyful process of learning for the students. Students require a less burdensome and stressful but enjoyable and refreshing experience of learning.

Nevertheless, the system of examination prevalent for centuries, cannot be changed overnight. It will take some time to change the system. While this

transition takes place, the unfair practices like, cheating in the examination hall and leakage of question papers should be checked. It must also be seen that the answer sheets of students are properly assessed by the teachers, so that fair evaluation takes place.
