

7. ELECTROMAGNETIC WAVES

Q. No	Question	Marks
Multiple Choice Question		
Q.134	<p>Study the following statements carefully.</p> <p>A. Electric and magnetic fields have zero average value in a plane em wave.</p> <p>B. For an em wave, the ratio k/ω is independent of wavelength.</p> <p>C. In an em wave, the E and B fields vary with the same frequency and are in opposite phase.</p> <p>D. Since $E = cB$, the energy associated with the electric field is much greater than that associated with the magnetic field.</p> <p>Identify the correct option.</p> <p>A. only A and B are correct</p> <p>B. only C and D are correct</p> <p>C. only A and C are correct</p> <p>D. only B and D are correct</p>	1
Q.135	<p>Which of the following statement/s are incorrect?</p> <p>A. The displacement current flows in a dielectric of the capacitor when the potential difference across its plates is decreasing with time.</p> <p>B. The direction of propagation of electromagnetic waves is given by $\vec{E} \times \vec{B}$</p> <p>C. The dimensions of $\epsilon_0 \frac{d\phi_E}{dt}$ are the same as that of electric voltage.</p> <p>D. Instantaneous energy flow rate is a constant for an electromagnetic wave.</p> <p>E. Light of uniform intensity shines perpendicularly on a totally absorbing surface.</p> <p>On decreasing the area of the surface, the intensity remains the same.</p> <p>A. Only statements A & B</p> <p>B. Only statements C & D</p> <p>C. Only statements D & E</p> <p>D. Only statements A, C & D</p>	1

Q.136	<p>The diagrams below show the electric and magnetic field components of an electromagnetic wave at a certain time and location.</p> <p>Which of these electromagnetic waves are travelling towards you?</p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;">  <p>Fig I</p> </div> <div style="text-align: center;">  <p>Fig II</p> </div> </div> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;">  <p>Fig III</p> </div> <div style="text-align: center;">  <p>Fig IV</p> </div> </div> <p>A. only the em wave in Fig I</p> <p>B. only the em wave in Fig I and II</p> <p>C. only the em wave in Fig II and III</p> <p>D. only the em wave in Fig II, III and IV</p>	1
Free Response Question / Subjective Question		
Q.137	<p>An electromagnetic wave of frequency 1 GHz travels through an empty space along the z-direction. At a specific point in space, the electric field E attains a maximum value of 50 V/m. If the electric wave is polarized along x-axis, then,</p> <p>(a) explain and identify the plane in which the magnetic field B will lie. (b) express the electric and magnetic fields as a function of z and t.</p>	3
Q.138	<p>In a spaceship orbiting around the Earth, two astronauts stationed 2 m apart are speaking to each other. The conversation is transmitted to Earth via electromagnetic waves.</p> <p>Given that the sound waves travel through the air between the two astronauts in exactly the same time as the em waves take to reach the Earth ground station.</p> <p>Calculate the distance of the spaceship from the ground station. Take speed of sound in the air between the two astronauts as 340 m/s.</p>	2

Q.139	<p>An unfortunate nuclear explosion leaves behind the residual gamma radiations in the vicinity of the explosion site with an average energy density of $4 \times 10^{-14} \text{ J/m}^3$.</p> <p>(a) What is the rms value of the electric field of the radiation?</p> <p>(b) Compare the electric field strength with the magnetic field strength in this residual radiation.</p>	2
Q.140	<p>A dish antenna with a circular aperture of a radius 20 cm, receives digital TV signals from a satellite. The average intensity of the em waves that carry a particular TV program is $5 \times 10^{-14} \text{ W/m}^2$.</p> <p>Determine the following:</p> <p>(a) electromagnetic energy delivered to the dish during the telecast of 30 minutes of a programme.</p> <p>(b) average energy density of the em wave.</p>	2
Q.141	<p>A laser emits a sinusoidal em wave of wavelength $10 \mu\text{m}$ along the x-axis. The E field of the wave is parallel to the -ve z-axis with a maximum value of 1 MV/m.</p> <p>Express the wave equation for E and B for this wave with all appropriate values and directions.</p>	3
Q.142	<p>A satellite at a height of 100 km from the Earth's surface detects a radio signal emitted by a radio station on the ground. If the average power of the signal received is 100 kW, find the amplitudes E_0 and B_0 of the incoming signal.</p>	3

Answer Key & Marking Scheme

Q. No	Answers	Marks
Q.134	A. only A and B are correct	1
Q.135	B. Only statements C & D	1
Q.136	D. only the em wave in Fig II, III and IV	1
Q.137	<p>(a) Since E wave is polarized along x-direction and the em wave propagates along z-direction, the magnetic field vector has to be perpendicular to both E wave and the direction of propagation of the wave. So, B vector is aligned along y axis and lies in y-z plane.</p> <p>[1 mark for correct explanation and the direction]</p> <p>(b) The standard waveforms of E and B vector in an em wave are: $E = E_0 \sin(kz - \omega t)$</p> <p>$B = B_0 \sin(kz - \omega t)$</p> <p>$B_0 = E_0/c = 50/c \text{ T}$</p> <p>$k = 2\pi/\lambda = 2\pi \nu/c = 2\pi \times 10^9/c$</p> <p>$E = 50 \sin \left(\frac{2\pi \times 10^9 z}{c} - 2\pi \times 10^9 \cdot t \right)$</p> <p>$E = 50 \sin [2\pi \times 10^9 \cdot (z/c - t)] \quad B = (50/c) \cdot \sin [2\pi \times 10^9 \cdot (z/c - t)]$</p> <p>[1 mark for each correct final equation of E and B]</p>	3
Q.138	<p>For the travel of sound waves between the two astronauts: $2 / 340 = t \dots(1)$</p> <p>For the travel of em waves from the spaceship to the Earth station: $d/(3 \times 10^8) = t \dots(2)$</p> <p>[0.5 mark for each of the equations for sound and em waves] Equating (1) and (2) and solving for d,</p> <p>$d \approx 1765 \text{ km}$</p> <p>[1 mark for correct final result]</p>	2

Q.139	<p>a. As energy density $u = \epsilon_0 E^2$</p> $E_{rms} = \sqrt{\frac{u}{\epsilon_0}} = \sqrt{\frac{4 \times 10^{-14}}{8.85 \times 10^{-12}}}$ <p>= 0.067 N/C</p> <p>[1 mark for the correct final result]</p> <p>b. In any em radiation, the ratio $E/B = c$, is always constant [1 mark for the correct application of the ratio between E to B in any em wave]</p>	2
Q.140	<p>(a) Average intensity $I = \text{average power } P / \text{area } A$ Average power $P = I \cdot A = I \cdot \pi r^2$ Average energy delivered during the telecast = $I \cdot \pi r^2 \cdot t$</p> <p>[0.5 mark for correct formula of energy in terms of intensity, area and time]</p> $E = 5 \times 10^{-14} \times \pi \times (0.2)^2 \times 1800$ $= 11.3 \times 10^{-12} \text{ J}$ <p>[0.5 mark for correct value of energy]</p> <p>(b) Energy density $u = I/c = 5 \times 10^{-14} / 3 \times 10^8 = 1.66 \times 10^{-22} \text{ J/m}^3$ [1 mark for correct result of energy density]</p>	2
Q.141	<p>The standard wave equations:</p> <p>$E_z = E_0 \sin(kx - \omega t)$... direction of E field will be along $-z$-axis $B_y = B_0 \sin(kx - \omega t)$.. direction of B field will be along y-axis</p> <p>Where $B_0 = E_0/c = 10^6/3 \times 10^8 = 3.3 \times 10^{-3} \text{ T}$ $k = 2\pi/\lambda = 2\pi / 10 \times 10^{-6} = 2\pi \times 10^5 / \text{m}$</p> <p>$\omega = ck = 3 \times 10^8 \times 2\pi \times 10^5 = 6\pi \times 10^{13} \text{ rad/s}$</p> <p>[0.5 mark for correct representation of E and correct values of B_0, k and ω]</p> <p>Equations:</p> <p>$E_z = -k (10^6 \text{ V/m}) \sin(2\pi \times 10^5 \cdot x - 6\pi \times 10^{13} \cdot t)$</p> <p>$B_y = j (3.3 \times 10^{-3} \text{ T}) \sin(2\pi \times 10^5 \cdot x - 6\pi \times 10^{13} \cdot t)$ [0.5 mark for each of E and B equations]</p>	3
Q.142	<p>Surface area of the hemisphere on the ground through which the signal is emitted by the radio station</p> $A = 2\pi R^2 = 2\pi (100 \times 1000)^2 = 2\pi \times 10^{10} \text{ m}^2$ <p>[0.5 mark for correct calculation of surface area]</p>	

Intensity of the signal received by the satellite = $I = \text{Average power} / \text{Area} = 100 \times 1000 / 2\pi \times 10^{10} = 10^{-5} / 2\pi \text{ W/m}^2$

[1 mark for correct calculation of Intensity of signal]

As $I = \epsilon_0 E_{\text{rms}}^2 c$

$$E_{\text{rms}} = \sqrt{\frac{I}{\epsilon_0 c}}$$

$$E_0 = \sqrt{\frac{2I}{\epsilon_0 c}} = \sqrt{\frac{2 \times 10^{-5}}{2\pi \times 8.85 \times 10^{-12} \times 3 \times 10^8}}$$

$$E_0 = 0.034 \text{ V/m}$$

[1 mark for correct calculation of E_0]

$$B_0 = E_0 / c = 0.0115 \times 10^{-8} \text{ T}$$

[0.5 mark for correct calculation of B_0]
