## Secondary suffix of some common functional groups (IUPAC)

A secondary suffix is added to the primary suffix to indicate the nature of the functional group present in the organic compounds. Secondary suffix of important functional groups are given below in their decreasing order of seniority.

Class	Name	Suffix	Prefix
1. R-COOH	Alkanoic Acid	-oic acid (carboxylic acid)	carboxy
2. R-SO <sub>3</sub> H	Alkane sulhonic Acid	-sulphonic acid	sulpho
3. R-C(=O)-C(=O)-R	Alkanonic Anhydride	-oic anhydride (carboxylic anhydride)	-----
4. R-COOR	Alkyl alkanoate	-oate (carboxylate)	alkoxy carbonyl or alkanoyl oxy
5. R-C(=O)-X	Alkanoyl halide	-oyl halide (carbonyl halide)	halo carbonyl
6. R-C(=O)-NH <sub>2</sub>	Alkanamide	-amide (carboxamide)	carbamoyl

### IUPAC system of nomenclature

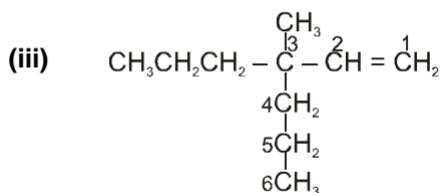

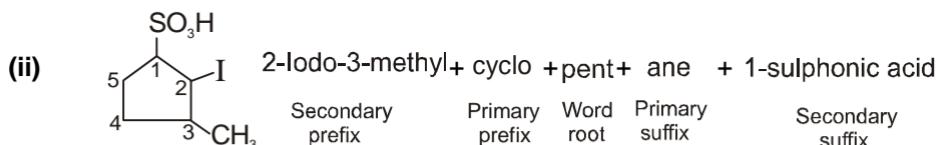

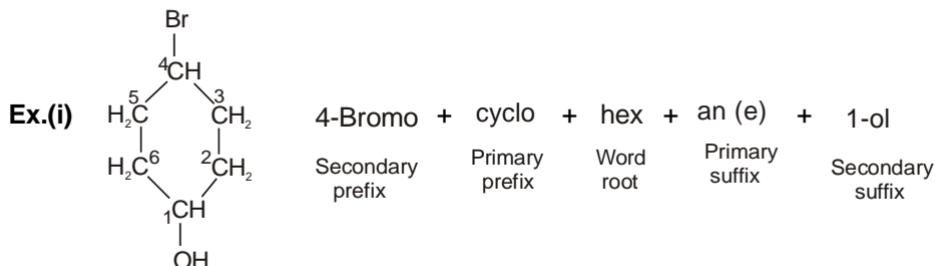

The IUPAC name of any organic compound consists of maximum five parts in the following sequence.

**Secondary prefix + Primary prefix + Word root + Primary suffix + Secondary suffix**

The following examples illustrate the use of word root, primary suffix and secondary suffix in naming of organic compounds.

Organic compounds	Word root	Primary suffix	Secondary suffix	IUPAC name
CH <sub>3</sub> CH <sub>2</sub> OH	Eth	an(e)	ol	Ethanol
CH <sub>3</sub> CH <sub>2</sub> CH <sub>2</sub> NH <sub>2</sub>	Prop	an(e)	amine	Propanamine
CH <sub>3</sub> CH <sub>2</sub> CH <sub>2</sub> COOH	But	an(e)	oic acid	Butanoic acid
CH <sub>3</sub> CH <sub>2</sub> CN	Prop	an(e)	nitrile	Propanenitrile
CH <sub>2</sub> =CHCHO	Prop	en(e)	al	Propenal
HC≡CCOOH	Prop	yn(e)	oic acid	Propynoic acid

The following examples illustrate the use of word root , primary prefix and secondary prefix in naming of organic compounds.

Position of double bond will be indicated as no. 1, Hence name will be 3–Methyl–3–propylhex–1–ene
